

Supplementary materials

Table S1. Further general characteristics of the study population

	Frequency	Percent (%)
EDUCATION		
• University	20	17.4
• High school	68	59.1
• Elementary or specialised school	8	7.0
• Not known	19	16.5
PLACE OF RESIDENCE		
• City	61	53.0
• Countryside	53	46.1
• Not known	1	0.9

Table S2. Further clinical characteristics of the study population (2019 data)

	Weight (kg)	LDL cholesterol (mmol/l)	eGFR (ml/s)
Median	75	2.7	1.8
Std. deviation	15	0.9	0.3
Minimum	50	1.2	0.5
Maximum	122	5.1	2.3

Legend: LDL (Low Density Lipoprotein), normal LDL cholesterol levels 1.5–3 mmol/l; eGFR (estimated Glomerular Filtration Rate).

Note: 17/115 patients had confirmed positive microalbuminuria.

Table S3. Development of Number of Patients using FreeStyle Libre Sensor, IHIS CR data (2021)

Year	Number of patients
2018	1,799
2019	7,433
2020	12,852
2021 (January–June)	15,212
